Education

North South University

Bachelor of Science in Computer Science, CGPA 3.87

June 2022 – May 2026

Bashundhara RA, Dhaka-1229

Notre Dame College

HSC, GPA 5.00

June 2019 – October 2021

Motijheel, Dhaka-1000

Professional Summary

Computer Science undergraduate specializing in scalable backend systems, LLM-powered applications, and applied AI research, with experience in software engineering, deep learning, and production-oriented system design.

Experience

Shiree

December 2022 - June 2023

Software Developer

Dhaka, Bangladesh

- Developed and maintained RESTful APIs and backend services using Node.js and Express, following business and system requirements.
- Collaborated with founders on product strategy and system design while contributing to backend development of the company's landing page.

Projects

RetailOS: AI-Native Retail Execution & Shelf Analysis Platform | *React, Vite, Node.js, Express, TypeScript, MongoDB, Redis, BullMQ, YOLO, Gemini API, Prometheus, Grafana*

May 2026

- Built a full-stack retail execution platform with an async Redis/BullMQ processing queue that runs custom YOLO product detection and Gemini API shelf analysis to generate supervisor reports.
- Developed a fraud detection engine (checking image blur, GPS mismatch, and duplicate hashes) to block bad evidence early, and integrated Prometheus/Grafana to monitor operational and AI model metrics.

Sposhto AI: Bengali Audio Deepfake Detecting App | *Kotlin, Android Studio, Java, TensorFlow, Keras, Google Colab, Librosa*

September 2024

- Trained and optimized a deep learning model for Bengali deepfake voice detection, achieving 91% training and 93% validation accuracy, and compressed it for edge deployment.
- Integrated the model into an Android app with real-time audio preprocessing and inference using Librosa and Kotlin.

Open Set Polyp Segmentation using Parameter Efficient Techniques in colonoscopy | *PyTorch, Native GPU, HuggingFace, Python, PIL, Transformers, Matplotlib, SciKit Learn*

February 2026

- Proposed a novel framework integrating an Open-Set Learning (OSL) module with parameter efficient techniques, resolving a fatal clinical flaw.
- Demonstrated "Zero-Shot Safety without Sacrifice", achieved state of the art polyp segmentation while training only a small percentage of total model parameters, adding a negligible inference overhead.
- *Under review at a Q1 journal (2026).*

Technical Skills

Languages: Python, Java, C, C++, HTML/CSS, JavaScript, MySQL, Fortran, Prolog, TypeScript

Developer Tools: Google Colab, Kaggle, VS Code, Eclipse, Google Cloud Platform

Technologies/Frameworks: PyTorch, Scikit-learn, Pandas, NumPy, REST APIs, TensorFlow, Keras, Nodejs, Expressjs, GitHub, BitBucket, Notion, LaTeX, MCP, Agentic AI, BullMQ, Redis, Prometheus, Grafana

Awards

Capstone Project Showcasing and Innovation Challenge

April, 2026

Won 3 out of 5 awards: 2nd Runner-Up, Best Innovative Idea, Best Poster

North South University

- Recognized by industry leaders among graduating capstone teams for technical innovation, presentation quality, and project impact.

Leadership / Extracurricular

National Idea Pitching Competition (Creaventure)

December, 2022

Winner

North South University

- Won a national cross-university startup pitching competition among 300+ teams.
